ABSTRACT

Due to the crucial relevance of clean and accessible water supplies, monitoring and analyzing water quality has become a top priority in modern environmental science. This abstract describes a novel approach to water portability study that makes use of IBM Cognos, a sophisticated business intelligence and data analytics tool, to obtain greater insight into the quality and portability of aquatic ecosystems. With the growing demand for efficient water resource management, incorporating Cognos into water quality evaluation provides a novel and disruptive perspective. This study investigates the use of Cognos in the context of water quality analysis, showcasing its data gathering, integration, visualization, and interpretation capabilities. Researchers and stakeholders can analyze huge information collected from multiple aquatic sources using Cognos' advanced data processing capabilities, providing a full understanding of water quality, finding patterns, and predicting potential environmental threats. The findings of this study have far-reaching ramifications, including improved water resource management, improved early warning systems for water-related catastrophes, and support for long-term environmental policy. The incorporation of Cognos in water portability analysis offers to design a more educated and proactive strategy to conserving our valuable water resources by bridging the gap between advanced data analytics and aquatic science. This abstract provides an overview of the possible benefits of such an approach, and it encourages further investigation and debate within the scientific and environmental communities.

1. INTRODUCTION

1.1 Project Overview:

"Aquatic Insights is a ground-breaking project that uses IBM Cognos to analyze water portability. Its main goals are to gather, clean, and standardize different types of water quality data from different sources. The project uses Cognos to provide data analytics and reporting with a mobile-friendly interface, robust security features, and an easy-to-use interface. It encourages cooperation, public awareness, and ongoing development. The goal of Aquatic Insights is to promote sustainable management of aquatic ecosystems and advance our knowledge of water resources."

1.2 Purpose:

The project "Aquatic Insights: Cognos-Powered Water Portability Analysis" aims to use IBM Cognos and advanced analytics for several purposes:

- Assess water quality and portability.
- Integrate diverse data sources for a comprehensive view.
- Standardize data to ensure consistency.
- Provide advanced analytics to identify trends and threats.
- Create a user-friendly platform for data interaction.
- Raise public awareness and offer educational resources.

The overarching purpose is to improve understanding and facilitate sustainable management of aquatic ecosystems for the benefit of researchers, policymakers, and the public.

2. LITERATURE SURVEY

2.1 Existing problem:

In the literature survey for the project "Aquatic Insights: Cognos-Powered Water Portability Analysis," several existing issues are identified:

- Limited data integration from diverse sources.
- Challenges in data standardization and consistency.
- Lack of predictive modeling for water quality trends.
- Poor accessibility and user-friendliness.
- Limited collaboration among stakeholders.
- Insufficient mobile accessibility for on-the-go access.
- Inadequate attention to data security and privacy.
- Limited emphasis on public awareness and education.
- Gaps in regulatory compliance.
- Potential issues with outdated information.

Addressing these problems is crucial for the project's success, ensuring it provides valuable and up-to-date insights into water quality and portability for a wide range of users and stakeholders.

2.3 Problem Statement Definition:

The problem statement for "Aquatic Insights: Cognos-Powered Water Portability Analysis" centers on addressing several key challenges in water quality assessment and management:

- Fragmented data sources and inconsistent data hinder comprehensive analysis.
- Current methods lack predictive modeling for anticipating water quality trends.
- Inadequate accessibility and user-friendliness limit information dissemination.
- Collaboration among experts and stakeholders needs improvement.
- Mobile accessibility for on-the-go access is lacking.
- Data security and privacy concerns pose risks.
- Public awareness and education about water quality are often insufficient.
- Regulatory compliance gaps and legal issues may arise.
- Environmental conditions change, requiring continuous updates.

The project aims to resolve these issues by creating a user-friendly, data-driven platform for understanding and managing water quality and portability in aquatic ecosystems.

3. IDEATION & PROPOSED SOLUTION

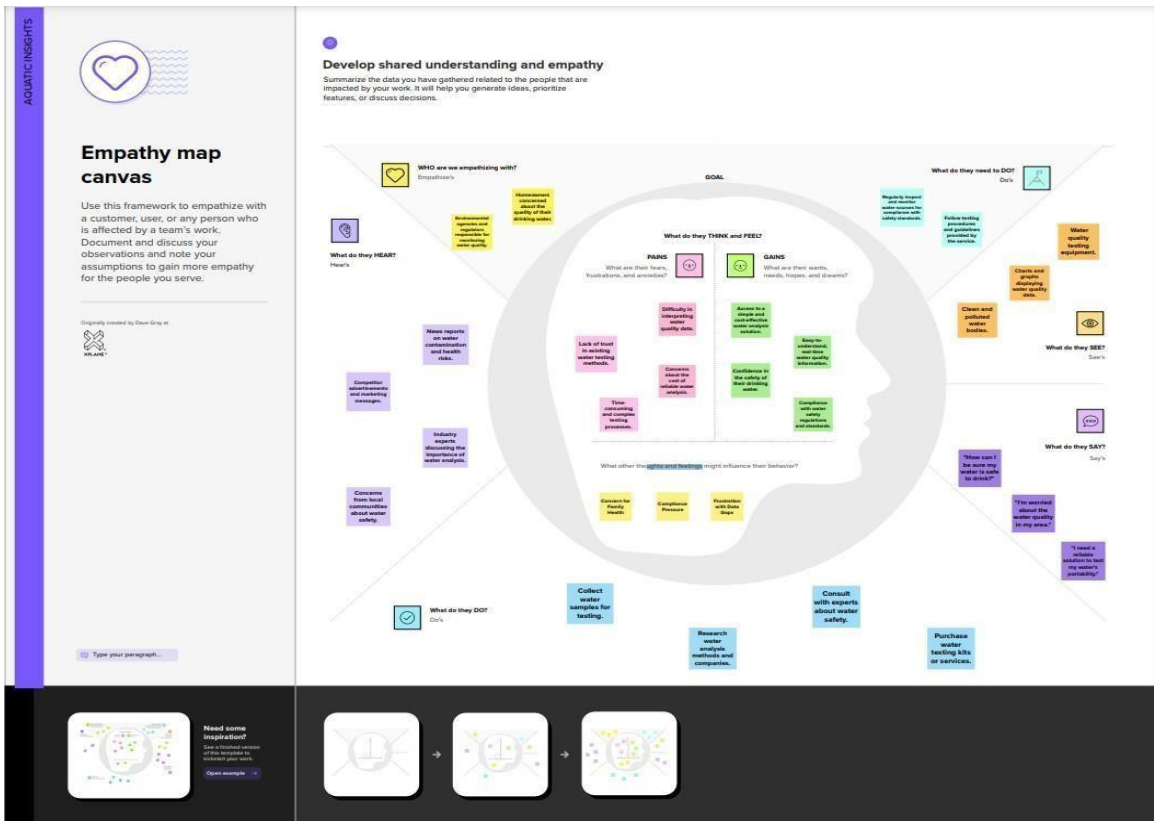

3.1 Empathy Map Canvas:

An empathy map is a straightforward, simple-to-understand graphic that conveys information about the attitudes and behaviors of users.

It's a helpful tool for teams to have a deeper understanding of their users.

Knowing the real issue and the individual suffering it is necessary to develop a workable solution. Participants learn to think about situations from the user's perspective, including goals and problems, through the exercise of constructing the map.

Example:

3.2 Ideation & Brainstorming:

The open, unrestricted environment that brainstorming creates makes it easier for team members to engage in the creative thought process that results in problem solving. Volume is valued more than quality, unconventional ideas are welcomed and expanded upon, and cooperation is encouraged among all participants in order to foster a wealth of creative solutions.

If your team isn't in the same room as you, use this template to let them shape concepts and let their imaginations run wild during brainstorming sessions.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Brainstorm & idea prioritization

Your own brainstorming sessions so your team can unleash their imagination and start shaping concepts even if you're not sitting in the same room.

10 minutes to prepare
1 hour to collaborate
3-5 people recommended

Before you collaborate

A little bit of preparation goes a long way with this session. Here's what you need to do to get going.

10 minutes

- Team gathering**
During this phase participants in the session will build an understanding of the problem statement and share relevant information as you start ideas.
- Set the goal**
Think about the problem you'll be discussing and setting the brainstorming session.
- Learn how to use the facilitation tools**
Join the Facilitation Requirements as well as helpful and productive session.

10 minutes

Define your problem statement

What problem are you trying to solve? Frame your problem as a How Might We statement. This will be the focus of your brainstorm.

10 minutes

Key rules of brainstorming

To create an efficient and productive session:

- Stay focused
- Encourage wild ideas
- Defers judgment
- Listen actively
- Go for quantity
- Suspend hierarchy

Reveal team inspiration!

View instructions

Step-2: Brainstorm, Idea Listing and Grouping

3 Brainstorm

Write down any ideas that come to mind that address your problem statement.

10 minutes

Shrisha N

- Real-time Water Quality Monitoring System
- Customized Water Treatment Solutions
- Educational Workshops and Webinars
- Community Water Quality Reporting Platform

Sarthosh Kumar B

- Environmental Impact Assessment Service
- Government Compliance Software
- Water Analysis Subscription Service
- Collaboration with Environmental Organizations

Sarthosh D

- Online Water Quality Marketplace
- Environmental Impact Certification Program
- Water Quality Podcast or Blog
- Water Quality Mobile App

Sarav K

- Water Quality Insurance Product
- User-Friendly Mobile App
- Educational Workshops
- Collaboration with Environmental Organizations

3 Group Ideas

Take turns sharing your ideas while clustering similar or related notes as you go. Cluster all sticky notes that have been grouped, give each cluster a sentence-like label. If a cluster is bigger than six sticky notes, try and see if you can break it up into smaller sub-groups.

20 minutes

Water Quality Monitoring Solutions

- Real-time monitoring system
- Education and Outreach
- Educational Workshops and Webinars
- Community Water Quality Reporting Platform
- Environmental Impact Assessment Service
- User-friendly mobile app

Step-3: Idea Prioritization

Prioritize

Your team should all be on the same page about what's important, moving forward. Place your ideas on this grid to determine which ones are important and which are feasible.

After you collaborate

You can export the mural as an image or put to share with members of your company who might find it helpful.

Quick actions

- Share the mural:** Share a view link to the mural with stakeholders to keep them in the loop during the iterations of the session.
- Export the mural:** Export a copy of the board as a PNG or PDF to preserve details, include a title, or save it later.

Keep moving forward

- Strategy blueprint:** Define the components of a new idea or strategy.
[Open the template >](#)
- Customer experience journey map:** Understand customer needs, interactions, and emotions throughout an experience.
[Open the template >](#)
- Strengths, weaknesses, opportunities & threats:** Identify strengths, weaknesses, opportunities, and threats (SWOT) in developing a plan.
[Open the template >](#)

[View template feedback](#)

4. REQUIREMENT ANALYSIS

4.1 Functional requirement:

The functional requirements for "Aquatic Insights: Cognos-Powered Water Portability Analysis" outline the specific features and capabilities the project's platform should possess. These requirements include:

- Data integration and management from various sources.
- Data standardization for consistency.
- Analytics and predictive modeling for water quality assessment.
- Interactive dashboards for data visualization.
- User profiles and access control.
- Development of a mobile application.
- Collaboration tools for experts.
- Strong data privacy and security measures.
- Reporting and alerts for critical events.
- Public engagement and education features.
- Continuous platform improvement.
- Regulatory compliance.
- Scalability and performance for handling large data volumes and users.

These requirements serve as the basis for creating a comprehensive and user-friendly platform for analyzing and managing water quality and portability in aquatic ecosystems.

4.2 Non-Functional requirements:

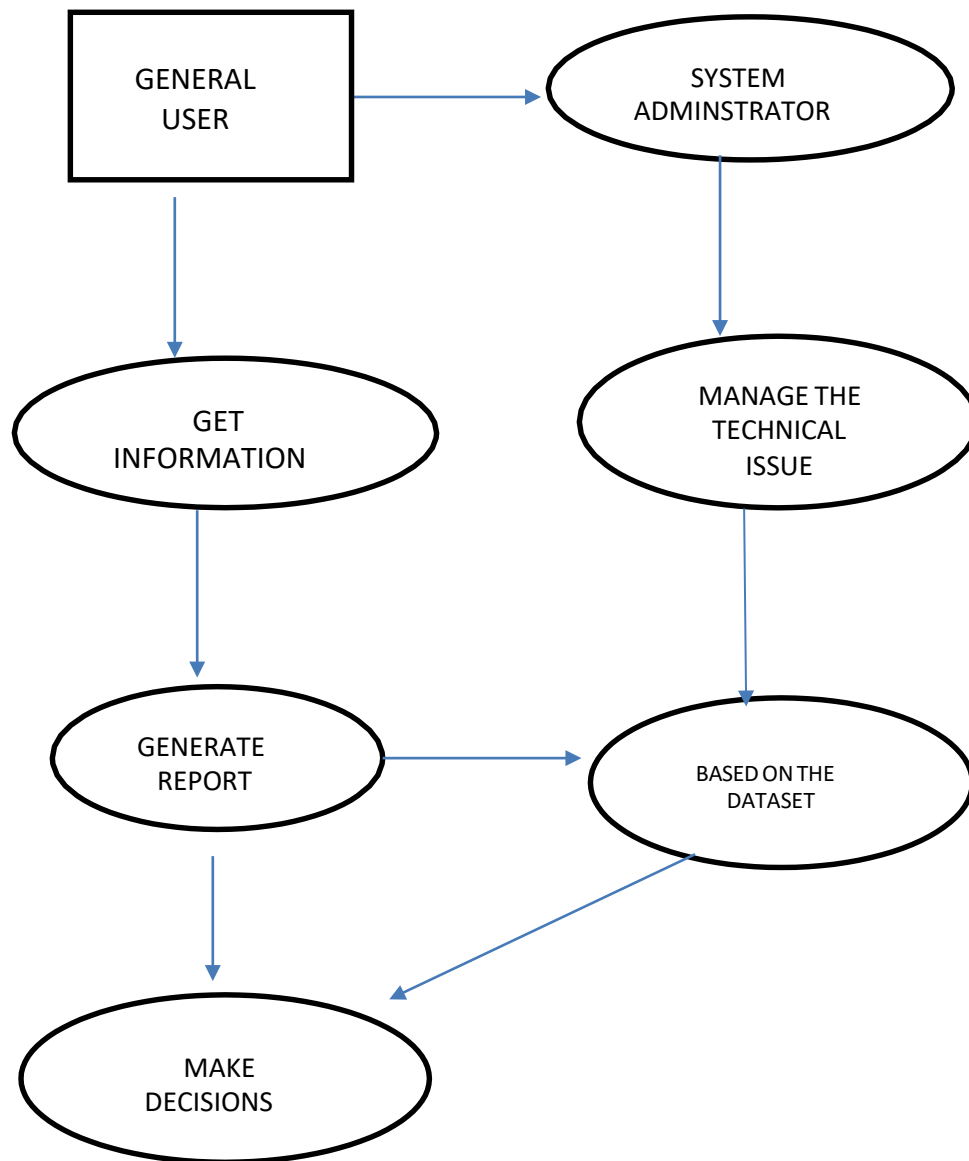

The non-functional requirements for "Aquatic Insights: Cognos-Powered Water Portability Analysis" outline the performance, reliability, usability, security, and compliance standards that the platform should meet. Key points include:

- 4.2.1 Fast performance and scalability to handle growth.
- 4.2.2 High reliability and data protection mechanisms.
- 4.2.3 Intuitive user interface and accessibility for all users.
- 4.2.4 Robust security and data privacy measures.
- 4.2.5 Interoperability with other systems.
- 4.2.6 Easy maintenance and regular updates.
- 4.2.7 Compliance with regulations and standards.
- 4.2.8 Load handling during peak events.
- 4.2.9 Data archiving and user support.

These non-functional requirements ensure the platform's effectiveness, user experience, and adherence to legal and environmental standards.

Physical diagrams show you the practical process of moving information through a system. It can show how your system's specific software, hardware, files, employees, and customers influence the flow of information.

Flow diagram:

User Stories:

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
PUBLIC	check water quality information for their area	USN-1	Public users can access the system to check the quality of water in their area. They can view real-time water quality information, including portability status.	I can access my account / dashboard	o/1	
		USN-2	Public users may set preferences to receive real-time alerts and notifications about water quality issues, such as water contamination or safety concerns.		0/1	
		USN-3	They can access historical water quality data to track changes and trends in water quality over time		0/1	
	Dashboard					
System Administrator			Infrastructure Management: System administrators are responsible for managing the technical infrastructure, including servers, databases, and software updates. They ensure that the system is running smoothly and efficiently.			

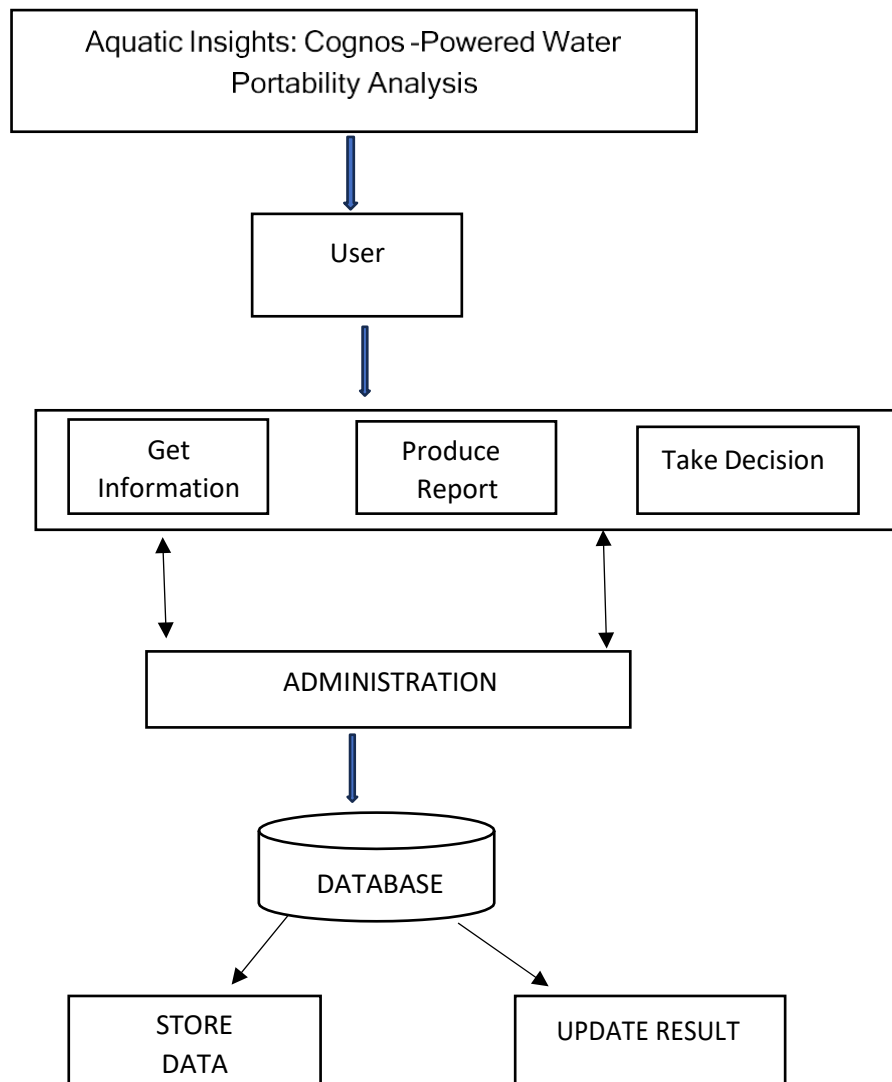

5.2 Solution Architecture:

Solution architecture is a complex process – with many sub-processes – that bridges the gap between business problems and technology solutions. Its goals are to:

- Find the best tech solution to solve existing business problems.
- Describe the structure, characteristics, behavior, and other aspects of the software to project stakeholders.
- Define features, development phases, and solution requirements.
- Provide specifications according to which the solution is defined, managed and delivered.

In solution architecture, the client needs are expanded to business needs that in one way or another are related to technology. These needs usually crystallize through re-assessing existing systems and finding out how they benefit or harm the organization in the long run. Sometimes, these evaluations are run by business analysts who also provide a definition of the problem. In the next step, solution architects take this problem and start crafting a description of solutions that appropriately address this need.

Example - Solution Architecture Diagram:

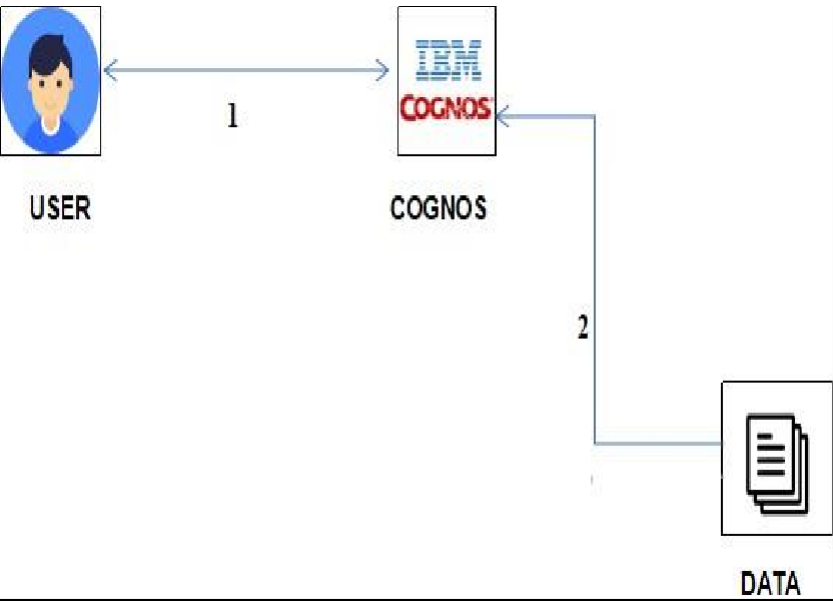

6. PROJECT PLANNING & SCHEDULING

6.1 Technical Architecture:

The Deliverable shall include the architectural diagram as below and the information as per the table1 & table 2

Reference: [https://www.kaggle.com/code/khsamaha/potable-water-prediction-0-798- with-caretf-r/input](https://www.kaggle.com/code/khsamaha/potable-water-prediction-0-798- with-caretf-r-input)

Components & Technologies:

S.No	Component	Description	Technology
1.	User Interface	How user interacts with application e.g. Web UI, Mobile App, Chatbotetc.	HTML, CSS, JavaScript / Angular Js / ReactJs etc.
2.	Application Logic-1	Logic for a process in the application	Python
3.	Application Logic-2	Logic for a process in the application	IBM Cognos Analytics
4.	Application Logic-3	Logic for a process in the application	IBM Cognos Analytics
5.	Database	Data Type, Configurations etc.	Excel

6.	Cloud Database	Database Service on Cloud	IBM DB2, IBM Cloudant etc.
7.	File Storage	File storage requirements	IBM Block Storage or Other Storage Service or Local Filesystem
8.	External API-1	Purpose of External API used in the application	IBM Weather API, etc.
9.	External API-2	Purpose of External API used in the application	Aadhar API, etc.
10.	Machine Learning Model	Purpose of Machine Learning Model	Object Recognition Model, etc.
11.	Infrastructure (Server / Cloud)	Application Deployment on Local System / Cloud Local Server Configuration: Cloud Server Configuration :	Local, Cloud Foundry, Kubernetes, etc.

6.2 Sprint Planning & Estimation:

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team members
Sprint -1	Registration	USN-1	As a user, I can register for the application by entering my email, password, and confirming my password.	2	High	
Sprint -1		USN-2	As a user, I will receive confirmation email once I have registered for the application	1	High	
Sprint -2		USN-3	As a user, I can register for the application through SmartInternz	2	Low	
Sprint -1		USN-4	As a user, I can register for the application through smartInternz provided email id.	2	Medium	
Sprint -1	Login	USN-5	As a user, I can log into the application by entering email & password	1	High	
	Dashboard					

6.3 Sprint Delivery Schedule:

Sprint	Total StoryPoints	Duration	Sprint Start Date	Sprint End Date (Planned)	Story Points Completed (as on Planned End Date)	Sprint ReleaseDate (Actual)
Sprint-1	20	1 Days	16 Oct 2023	16 Oct 2023	16 Oct 2023	16 Oct 2023
Sprint-2	20	1 Days	17 Oct 2023	17 Oct 2023	17 Oct 2023	17 Oct 2023
Sprint-3	20	1 Days	18 Oct 2023	18 Oct 2023	18 Oct 2023	18 Oct 2023
Sprint-4	20	1 Days	19 Oct 2023	19 Oct 2023	19 Oct 2023	19 Oct 2023

8. PERFORMANCE TESTING

8.1 Performance Metrics:

S.No.	Parameter	Screenshot / Values
1.	Dashboard design	No of Visualizations / Graphs – We have include 4 tabs
2.	Data Responsiveness	The system's ability to efficiently analyze these indicators and provide real-time predictions, ensuring the availability of safe drinking water in regions facing a crisis
3.	Amount Data to Rendered (DB2 Metrics)	The global drinking water crisis by ensuring the availability of safe and potable water in regions facing water quality concerns
4.	Utilization of Data Filters	Employed to narrow down the dataset and focus the analysis such as assess water quality
5.	Effective User Story	No of Scene Added - 4
6.	Descriptive Reports	No of list / Graphs – 1

9. RESULTS

9.1 Output Screenshots:

10. ADVANTAGES & DISADVANTAGES

☐ **Advantages:**

The project "Aquatic Insights: Cognos-Powered Water Portability Analysis" offers a range of advantages:

- Comprehensive water quality assessment with predictive capabilities.
- User-friendly interface accessible to experts and the public.
- Data integration for a complete view of water quality.
- Facilitation of collaboration and knowledge sharing.
- Promotion of public awareness and regulatory compliance.
- Robust data security and continuous improvements.
- Resource efficiency and environmental sustainability.
- Data-driven decision-making for policymakers and researchers.
- Customization and scalability for future growth.
- Real-time monitoring and international collaboration.

These advantages collectively contribute to improved water quality management and sustainable ecosystems.

□ **Disadvantages:**

The project "Aquatic Insights: Cognos-Powered Water Portability Analysis" comes with several potential disadvantages and challenges:

- Handling complex and diverse data sources.
- Data availability limitations in remote or less-studied areas.
- Technical barriers for some users with limited skills.
- Ongoing maintenance and software update costs.
- Stringent data privacy and security requirements.
- Regulatory compliance complexities.
- Resource-intensive computational and human requirements.
- High initial implementation costs.
- Sustaining user engagement and public awareness.
- Ensuring data consistency across various sources.
- Adaptation to changing environmental conditions.
- Potential public resistance to sharing data.
- Mobile application compatibility challenges.
- Scalability concerns as the project grows.
- Effective communication with diverse stakeholders.

Mitigating these challenges will be vital for the project's success and its ability to deliver comprehensive water quality insights.

11. CONCLUSION

To sum up, "Aquatic Insights: Cognos-Powered Water Portability Analysis" offers a viable way to deal with issues related to managing and assessing water quality.

The project provides important insights into aquatic ecosystems by utilizing modern data analytics, user-friendly interfaces, and collaboration tools.

It provides benefits like enhanced evaluation of water quality and knowledgeable decision-making, supporting environmental sustainability.

The project's objectives are reachable with proper planning and commitment, even in the face of possible obstacles like data complexity and privacy issues.

"Aquatic Insights" may prove to be a useful tool for a range of stakeholders, acting as a spur for improvements in the management of aquatic ecosystems. The project represents a viable route for maintaining natural water supplies and managing water quality sustainably.

12. FUTURE SCOPE

The future scope for "Aquatic Insights: Cognos-Powered Water Portability Analysis" is expansive and promising. It includes:

- Incorporating advanced data sources, AI, and IoT for more comprehensive and real-time water quality analysis.
- Implementing blockchain for enhanced data security and transparency.
- Facilitating global collaboration and data sharing.
- Developing educational resources and influencing water quality policies.
- Addressing climate change and ecosystem health, and expanding the project's focus to include flood monitoring and environmental equity.⁷⁷
- Promoting sustainable practices and contributing to open data initiatives.

The project has the potential to become a comprehensive and collaborative platform, empowering stakeholders to better understand and manage aquatic ecosystems in an increasingly complex world.
